

Conserving Our Future: The What and Why of Weird Weather

Featuring Dr. Scott Denning

Thursday, May 20th, 2021

7pm - 8:15pm on Zoom

Registration Link:
bit.ly/ConservingOurFuture

Here's your chance to hear, in a common sense way, about weird weather from climate scientist Dr. Scott Denning from Colorado State University, in his talk 'Simple. Serious. Solvable'. Plus, he'll be open to any questions you have!

We'll also hear from a Montana doctor, a financial advisor, and a rancher on ways your health, your pocketbook, and your food are impacted by these trends of fire, hail, wind, drought, and other extreme weather events, and how solutions can create new opportunities.

The speakers include:

- Dr. Marian Kummer, a retired pediatrician from Billings MT
- Logan Mannix, a rancher with Mannix Grassfed Beef, Helmville MT
- Paul Herendeen, from Clearwater Credit Union, Missoula MT

We hope you'll find answers for these questions: how much does weird weather matter to me and my family, can we do anything about it, and are there cost-effective nonpartisan solutions?
